

IP Security (IPSec) Configuration

Aim: To Configure IPSec on network devices to provide secure communication and protect against unauthorized access and attacks.

Theory:

Some theoretical aspects of IPSec and the concept of an IPSec VPN tunnel:

1. IPSec Overview:

- IPSec (Internet Protocol Security) is a comprehensive suite of protocols and standards used for securing communication over IP networks, such as the Internet.
- It ensures the confidentiality, integrity, and authenticity of data transmitted between devices or networks.

2. Security Goals of IPSec:

- Confidentiality: IPSec achieves data privacy through encryption.
- Integrity: It guarantees that data remains unaltered during transit.
- Authentication: IPSec verifies the identity of communicating parties to prevent unauthorized access and impersonation.

3. Components of IPSec:

- IPSec comprises multiple protocols and elements, including Authentication Header (AH), Encapsulating Security Payload (ESP), Security Associations (SAs), and key management protocols.

4. IPSec VPN Tunnel:

- An IPSec VPN tunnel is a secure, encrypted connection established between two endpoints or networks over the Internet or untrusted networks.
- It is created using the IPSec suite to provide a secure and private channel for data transmission.

5. Establishing a VPN Tunnel:

- The process begins with the negotiation and establishment of Security Associations (SAs) between the endpoints.
- These SAs define parameters like encryption methods, authentication, and shared keys.

6. Modes of Operation:

- VPN tunnels can operate in either Transport Mode (securing data payload) or Tunnel Mode (securing entire IP packets, including headers).
- Transport Mode is often used for host-to-host communication, while Tunnel Mode is suitable for network-to-network connections.

7. Data Encryption and Authentication:

- Data transmitted through the VPN tunnel is encrypted using algorithms specified in the SAs, ensuring data privacy.
- Authentication and data integrity checks prevent tampering or unauthorized access.

8. Routing and Secure Communication:

- Once established, the VPN tunnel allows secure data routing between the endpoints or networks.

- Applications and services on either side can communicate securely, even over untrusted networks like the Internet.

9. Use Cases:

- IPSec VPN tunnels are used for various purposes, including remote access VPNs, site-to-site VPNs, secure data transfer, and protecting real-time communication like VoIP and video conferencing.

10. Key Management:

- Secure key management is critical for the long-term security of IPSec VPN tunnels.
- Keys can be generated manually or through automated key exchange protocols like Internet Key Exchange (IKE).

11. Security Policies:

- Organizations define security policies that determine when and how IPSec should be applied to protect specific types of traffic or communication.

12. Interoperability:

- IPSec is widely adopted, ensuring interoperability between different vendors' equipment and making it a versatile choice for securing networks and data.

Understanding the principles of IPSec and IPSec VPN tunnels is essential for designing, deploying, and managing secure communication in various network environments, ensuring data remains confidential, unaltered, and protected from unauthorized access.

Topology:

We use the following topology for the present case

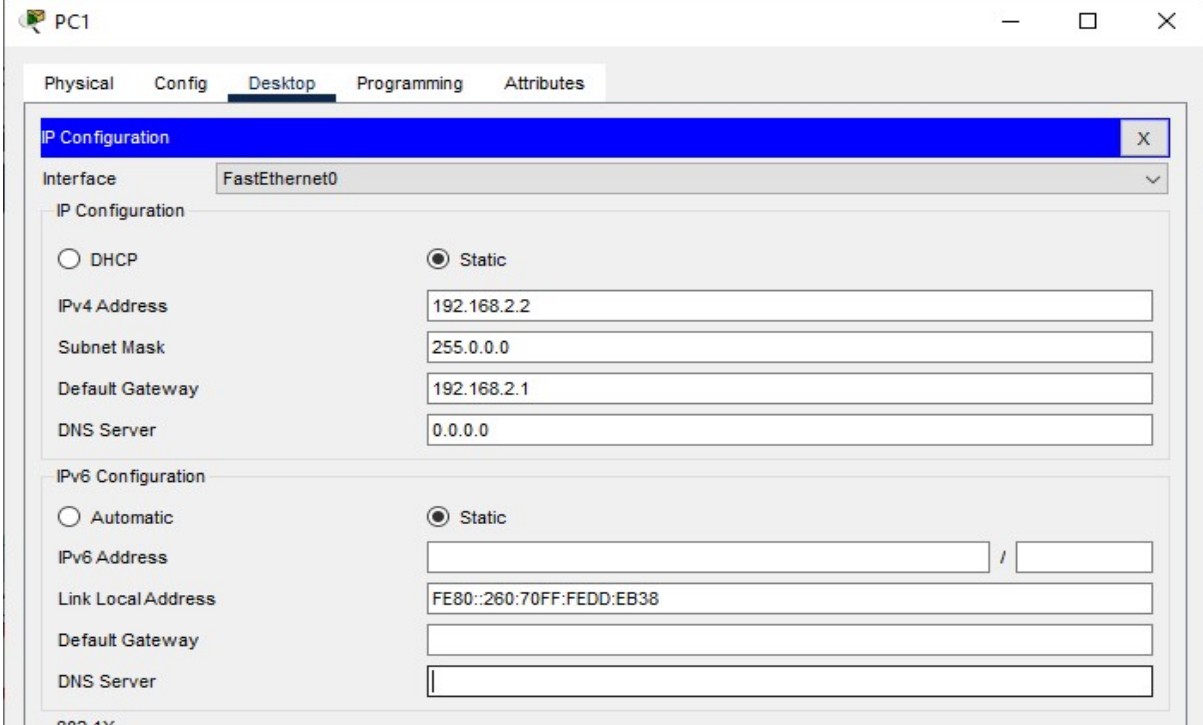

ISAKMP Policy Parameters			
Parameters	Parameter Options and Defaults	R1	R2
Key Distribution Method	Manual or ISAKMP	ISAKMP	ISAKMP
Encryption Algorithm	DES, 3DES or AES	AES-256	AES-256
Hash Algorithm	MD5 or SHA-1	SHA-1	SHA-1
Authentication Method	Pre-shared Key or RSA	Pre-shared	Pre-shared
Key Exchange	DH Group 1, 2 or 5	Group 5	Group 5
ISE SA Lifetime	86400 seconds or less	86400	86400
ISAKMP Key	User defined	ismile	ismile

IPSec Policy Parameters		
Parameters	R1	R2
Transform Set Name	VPN-SET	VPN-SET
ESP Transform Encryption	esp-aes	esp-aes
ESP Transform Authentication	esp-sha-hmac	esp-sha-hmac
Peer IP Address	30.0.0.1	20.0.0.1
Traffic to be Encrypted	R1->R2	R2->R1
Crypto Map Name	IPSEC-MAP	IPSEC-MAP
SA Establishment	ipsec-isakmp	ipsec-isakmp

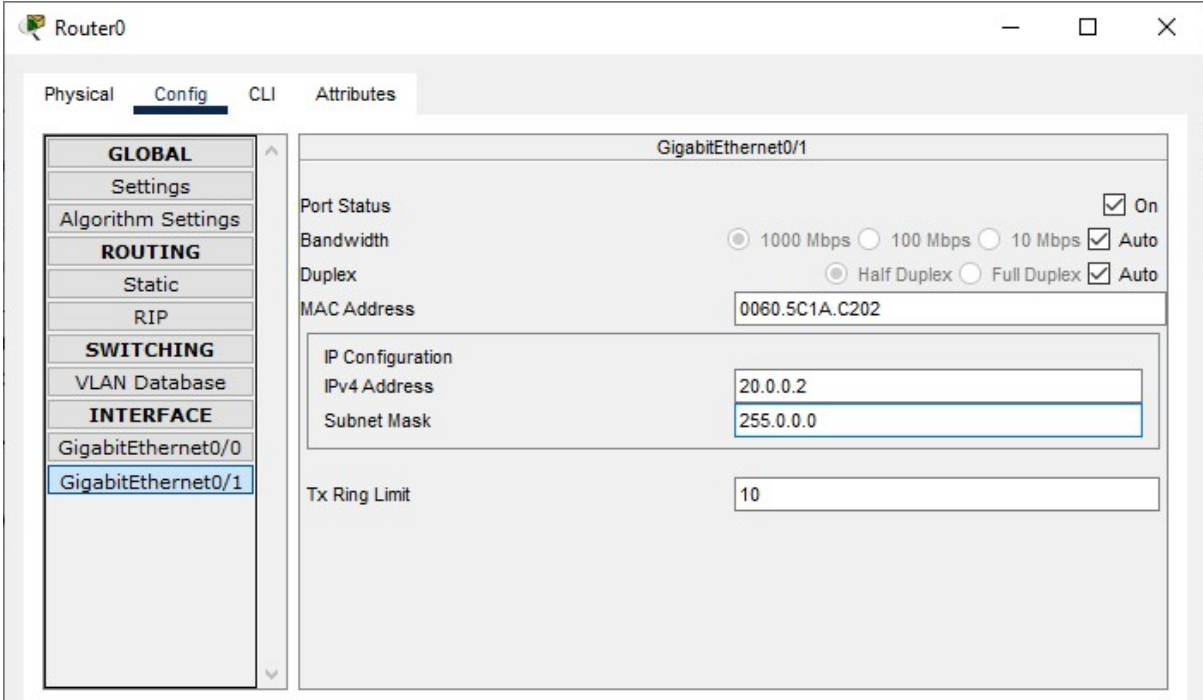

Configuring PC0:

The screenshot shows the configuration window for PC0. The 'Desktop' tab is selected. Under 'IP Configuration', the 'Static' radio button is chosen. The IPv4 Address is 192.168.1.2, Subnet Mask is 255.255.255.0, Default Gateway is 192.168.1.1, and DNS Server is 0.0.0.0. Under 'IPv6 Configuration', the 'Static' radio button is also chosen. The IPv6 Address field is empty, followed by a slash and another empty field. The Link Local Address is FE80::200:CFF:FE61:CEE1. The Default Gateway and DNS Server fields for IPv6 are also empty.

Configuring PC1:

The screenshot shows the 'PC1' configuration window with the 'Desktop' tab selected. The 'IP Configuration' section is expanded, showing settings for the 'FastEthernet0' interface. The 'Static' radio button is selected for both IPv4 and IPv6 configurations.

IP Configuration	
Interface	FastEthernet0
IPv4 Configuration	
<input type="radio"/> DHCP	<input checked="" type="radio"/> Static
IPv4 Address	192.168.2.2
Subnet Mask	255.0.0.0
Default Gateway	192.168.2.1
DNS Server	0.0.0.0
IPv6 Configuration	
<input type="radio"/> Automatic	<input checked="" type="radio"/> Static
IPv6 Address	
Link Local Address	FE80::260:70FF:FEDD:EB38
Default Gateway	
DNS Server	

Configuring Router0:**Interface GigabitEthernet0/1:**

The screenshot shows the 'Router0' configuration window with the 'Config' tab selected. The 'GigabitEthernet0/1' interface is selected in the left sidebar. The 'Port Status' is 'On', 'Bandwidth' is '1000 Mbps', 'Duplex' is 'Half Duplex', and 'MAC Address' is '0060.5C1A.C202'. The 'IP Configuration' section shows 'IPv4 Address' as '20.0.0.2' and 'Subnet Mask' as '255.0.0.0'. The 'Tx Ring Limit' is set to '10'.

GigabitEthernet0/1	
Port Status	<input checked="" type="checkbox"/> On
Bandwidth	<input checked="" type="radio"/> 1000 Mbps <input type="radio"/> 100 Mbps <input type="radio"/> 10 Mbps <input checked="" type="checkbox"/> Auto
Duplex	<input checked="" type="radio"/> Half Duplex <input type="radio"/> Full Duplex <input checked="" type="checkbox"/> Auto
MAC Address	0060.5C1A.C202
IP Configuration	
IPv4 Address	20.0.0.2
Subnet Mask	255.0.0.0
Tx Ring Limit	10

Interface GigabitEthernet0/0:

The screenshot shows the configuration window for Router0, specifically for the GigabitEthernet0/0 interface. The window has tabs for Physical, Config, CLI, and Attributes, with 'Config' selected. On the left, a tree view shows the configuration hierarchy: GLOBAL (Settings, Algorithm Settings), ROUTING (Static, RIP), SWITCHING (VLAN Database), and INTERFACE (GigabitEthernet0/0, GigabitEthernet0/1). The main area displays the configuration for GigabitEthernet0/0. The Port Status is 'On'. Bandwidth is set to 1000 Mbps, and Duplex is set to Full Duplex. The MAC Address is 0060.5C1A.C201. The IP Configuration section shows an IPv4 Address of 30.0.0.2 and a Subnet Mask of 255.0.0.0. The Tx Ring Limit is set to 10.

GigabitEthernet0/0	
Port Status	<input checked="" type="checkbox"/> On
Bandwidth	<input checked="" type="radio"/> 1000 Mbps <input type="radio"/> 100 Mbps <input type="radio"/> 10 Mbps <input checked="" type="checkbox"/> Auto
Duplex	<input type="radio"/> Half Duplex <input checked="" type="radio"/> Full Duplex <input checked="" type="checkbox"/> Auto
MAC Address	0060.5C1A.C201
IP Configuration	
IPv4 Address	30.0.0.2
Subnet Mask	255.0.0.0
Tx Ring Limit	10

Configuring Router1:**Interface GigabitEthernet0/0:**

The screenshot shows the configuration window for Router1, specifically for the GigabitEthernet0/0 interface. The window has tabs for Physical, Config, CLI, and Attributes, with 'Config' selected. On the left, a tree view shows the configuration hierarchy: GLOBAL (Settings, Algorithm Settings), ROUTING (Static, RIP), SWITCHING (VLAN Database), and INTERFACE (GigabitEthernet0/0, GigabitEthernet0/1). The main area displays the configuration for GigabitEthernet0/0. The Port Status is 'On'. Bandwidth is set to 1000 Mbps, and Duplex is set to Full Duplex. The MAC Address is 000D.BDE2.C101. The IP Configuration section shows an IPv4 Address of 20.0.0.1 and a Subnet Mask of 255.0.0.0. The Tx Ring Limit is set to 10.

GigabitEthernet0/0	
Port Status	<input checked="" type="checkbox"/> On
Bandwidth	<input checked="" type="radio"/> 1000 Mbps <input type="radio"/> 100 Mbps <input type="radio"/> 10 Mbps <input checked="" type="checkbox"/> Auto
Duplex	<input type="radio"/> Half Duplex <input checked="" type="radio"/> Full Duplex <input checked="" type="checkbox"/> Auto
MAC Address	000D.BDE2.C101
IP Configuration	
IPv4 Address	20.0.0.1
Subnet Mask	255.0.0.0
Tx Ring Limit	10

Interface GigabitEthernet0/1:

The screenshot shows the configuration window for Router1, specifically for the GigabitEthernet0/1 interface. The window has tabs for Physical, Config, CLI, and Attributes, with 'Config' selected. On the left, a tree view shows the configuration hierarchy: GLOBAL (Settings, Algorithm Settings), ROUTING (Static, RIP), SWITCHING (VLAN Database), and INTERFACE (GigabitEthernet0/0, GigabitEthernet0/1). The main area displays the configuration for GigabitEthernet0/1. The Port Status is checked 'On'. Bandwidth is set to 1000 Mbps, and Duplex is set to Full Duplex, both with 'Auto' checkboxes. The MAC Address is 000D.BDE2.C102. The IP Configuration section shows an IPv4 Address of 192.168.1.1 and a Subnet Mask of 255.255.255.0. The Tx Ring Limit is set to 10.

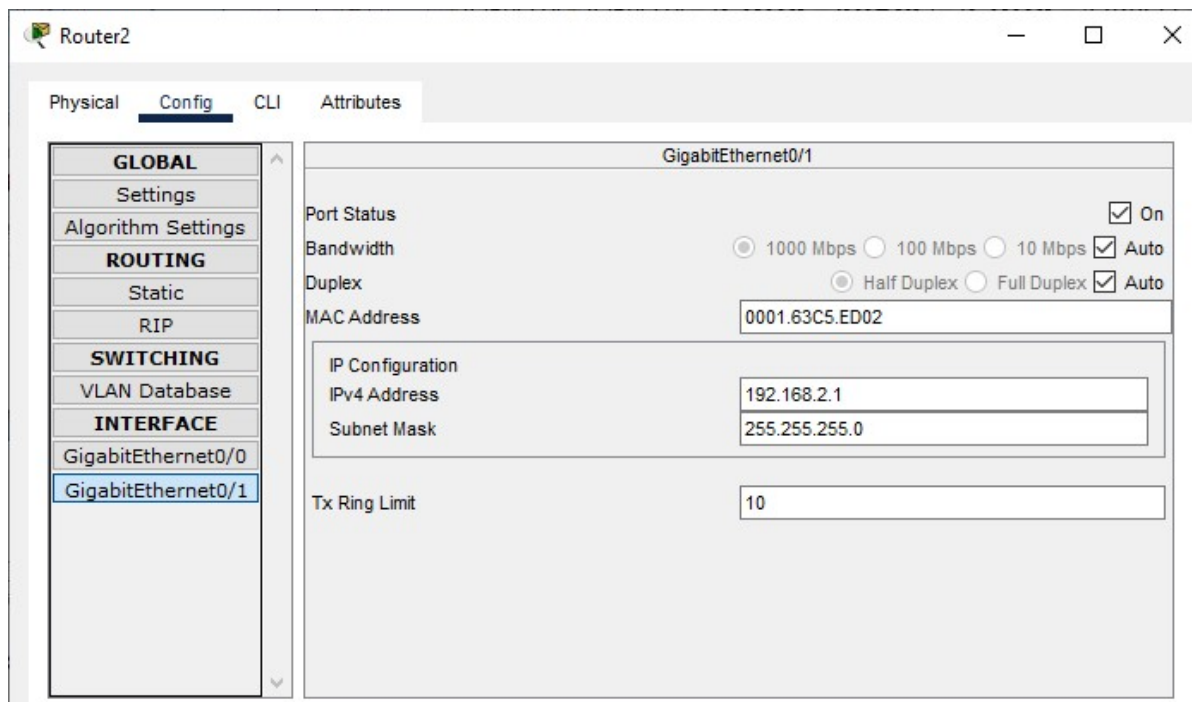

GigabitEthernet0/1	
Port Status	<input checked="" type="checkbox"/> On
Bandwidth	<input checked="" type="radio"/> 1000 Mbps <input type="radio"/> 100 Mbps <input type="radio"/> 10 Mbps <input checked="" type="checkbox"/> Auto
Duplex	<input type="radio"/> Half Duplex <input checked="" type="radio"/> Full Duplex <input checked="" type="checkbox"/> Auto
MAC Address	000D.BDE2.C102
IP Configuration	
IPv4 Address	192.168.1.1
Subnet Mask	255.255.255.0
Tx Ring Limit	10

Configuring Router2:**Interface GigabitEthernet0/0:**

The screenshot shows the configuration window for Router2, specifically for the GigabitEthernet0/0 interface. The window has tabs for Physical, Config, CLI, and Attributes, with 'Config' selected. On the left, a tree view shows the configuration hierarchy: GLOBAL (Settings, Algorithm Settings), ROUTING (Static, RIP), SWITCHING (VLAN Database), and INTERFACE (GigabitEthernet0/0, GigabitEthernet0/1). The main area displays the configuration for GigabitEthernet0/0. The Port Status is checked 'On'. Bandwidth is set to 1000 Mbps, and Duplex is set to Full Duplex, both with 'Auto' checkboxes. The MAC Address is 0001.63C5.ED01. The IP Configuration section shows an IPv4 Address of 30.0.0.1 and a Subnet Mask of 255.0.0.0. The Tx Ring Limit is set to 10.

GigabitEthernet0/0	
Port Status	<input checked="" type="checkbox"/> On
Bandwidth	<input checked="" type="radio"/> 1000 Mbps <input type="radio"/> 100 Mbps <input type="radio"/> 10 Mbps <input checked="" type="checkbox"/> Auto
Duplex	<input type="radio"/> Half Duplex <input checked="" type="radio"/> Full Duplex <input checked="" type="checkbox"/> Auto
MAC Address	0001.63C5.ED01
IP Configuration	
IPv4 Address	30.0.0.1
Subnet Mask	255.0.0.0
Tx Ring Limit	10

Interface GigabitEthernet0/1:

Checking and Enabling the Security features in Router R1 and R2:

Enter the following command in the CLI mode of Router1

```
Router(config)#ip route 0.0.0.0 0.0.0.0 20.0.0.2
Router(config)#hostname R1
R1(config)#exit
R1#show version
```

```

Device#      PID      SN
-----
*0           CISCO1941/K9      FTX1524N826-

Technology Package License Information for Module:'c1900'
